UNDERSTANDING GLOVE & SLEEVE PPE STANDARDS

International (ISO) and Australian/New Zealand standards classify and communicate the quality and protection levels of PPE (personal protection equipment). Numeric codes and symbols are used for specifying the correct level of protection for their task. Matching the right product to the appropriate risk can also help with cost controls. These ratings are earned via appropriate testing under the supervision of a third party registered certifying body.

EXISTING: AQL (Acceptable Quality Level) for liquid penetration. A high index number is poor and a low index number is good. Gloves need to pass water and air leak test

THIS TEST METHOD REMAINS UNCHANGED

IN ADDITION: NEW VIRAL PENETRATION TEST. For protection from bacteria and fungi.
